PROBIOTIC TREATMENTS

Drains / Stacks / Chutes / Bins / Floors / Grease Traps / Stair Wells / Bathrooms / Etc.

A Bio-degradable, All Natural Odour Solution??

An effective bio-augmentation program can only provide a positive effect on collection and treatment systems downstream. As the organisms continue to multiply and actively degrade organics, they contribute to grease degradation downstream. There is no mechanism whereby these organisms can contribute to grease build-up in the lines. **Used properly, they allow reduction of maintenance pumping, eliminate back-ups, and decrease or eliminate odour generation in grease traps, or wherever used.** Microbial bio-augmentation products maintain a balanced metabolism within the system, promoting complete breakdown of grease. Low levels of surfactant and enzymes are added for the sole purpose of initiating degradation processes while the added organisms are acclimatizing to their new environment.

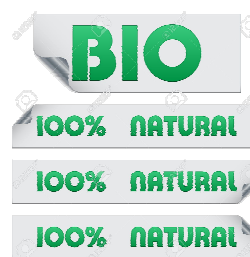

The Product.

*** SAVES TIME - SAVES MONEY.**

*** VERY SAFE TO USE.**

*** CLEARS DRAINS.**

*** ELIMINATES ODOUR.**

Safe on ALL surfaces unaffected by water.
