

# PROBIOTIC ODOUR CONTROL

**ODOR-ZYME**

**MULTI-ZYME**

**BIO-ZYME**

## THE ISSUE

We are surrounded by cleaning products and their residues all the time, wherever we are. As well as ensuring cleanliness, they leave behind chemical residues. Harmful bacteria are often resistant to them. The use of **BioZyme**, **OdorZyme** and **MultiZyme** PROBIOTIC products can totally prevent unhealthy residues whilst also cleaning more sustainably and hygienically.

## EFFECT & BENEFITS IN CLEANING & THE INDOOR ENVIRONMENT

PROBIOTIC cleaners promote positive bacteria, providing natural protection for our skin and our living environment. They create an environment where pathogenic bacteria cannot survive as the introduced probiotics are dominant. Due to the natural ingredients and positive microorganisms, the products are exceptionally gentle on skin and materials. Compared to conventional cleaners, PROBIOTIC cleaning products offer significant advantages in eliminating microbiological impurities. (extract from the report by Prof. Pfannhauser.)

- Eliminates bad odours - NO masking with perfumes
- Effective and economical: low cost due to high dilution rates
- Particularly suitable for those with allergies
- Outstanding cleaning performance on all surfaces and materials
- Probiotic cleaning effect prevents dirt and odours from recurring
